Philippe Starck's new collection of Prefabricated Accessible Technological Homes (nicknamed P.A.T.H.), is a design-it-yourself program that offers a number of choices: a concentric or open design, one or two stories, your pick of 34 floor plans. One can select an all-glass outer shell, a wood-and-glass combination, or an all-wood structure, which can be filled with Starck-approved fittings and fixtures. With solar panels, roof-installed wind turbines, and rainwater-recovery systems, it's as eco-friendly as it is sleek. Starck has plans to move into his own just outside Paris.
